

NORDENHAM SEAPORT

A Driving Force in the Transport Chain

More than 100 Years of the Seaport Tradition and Innovation

- Rhenus Midgard & Co. KG is based at Nordenham on the Weser estuary. We operate a public seaport at this location with two terminals situated right next to the shipping channel, one in Nordenham itself and the other in Blexen nearby.
- Large ships can quickly reach our terminal close to the North Sea on the Lower Weser. Goods can be transported upstream and downstream easily as a result of the excellent links to European inland waterways and the rail and road networks.
- As the private owner of the superstructure and infrastructure at our terminals, we have a free hand when it comes to making corporate decisions for the benefit of our customers.
- As a partner in the Rhenus Group we can also offer multimodal gate-to-gate and door-to-door solutions for shippers and consignees.

Nordenham – A Strong Partner for Industry and the Transport Sector

The Nordenham terminal is a multimodal hub serving oceangoing and inland water shipping as well as rail and road transport. We can also directly transship bulk cargo from one vessel to another.

For this reason, energy suppliers, commercial and industrial companies have their finished products, plant and raw materials shipped through Nordenham. Our capacities and our qualified personnel guarantee rapid transport, safe and secure loading and shipping in addition to efficient storage and reliable distribution.

Liquid or solid, bulk or mixed goods – the broad range of services on offer make Nordenham an essential link for important supply chains.
